```
GN: True (T) if Gauss-Newton Hessian is used, False (F) if Hessian is used
```

```
BP: True (T) if we built or rebuilt the preconditioner, False (F) otherwise.
```

```
cost: cost, J = Jd + Jr
```

```
misfit: misfit cost, Jd
```

```
reg: regularization cost, Jr
```

```
(g,p): inner product between gradient, g, and Newton search direction, p
```

```
||g||L2: l2 norm of gradient
```

```
alpha: step size
```

```
tolcg: relative tolerance for Hp=-g CG solve (unpreconditioned residual decrease)
```

Preconditioned inexact Newton-CG with line search

```

Hp=-g
u <- u + alpha * p
u: parameter, J: cost, g: gradient, H: Hessian, alpha=step size, p=search direction

it=0    : u=u0      -> J -> g -> build precond (optional) -> cgssolve Hp=-g
it=1    : linesearch u -> J -> g -> build precond (optional) -> cgssolve Hp=-g
...
it=last : linesearch u -> J -> g -> Done.

it:      Newton iteration number
nCG:     number of CG iterations in Newton iteration
nJ:      number of cost function evaluations in Newton iteration
nG:      number of gradient evaluations in Newton iteration
nHp:     number of Hessian-vector products in Newton iteration
GN:      True (T) if Gauss-Newton Hessian is used, False (F) if Hessian is used
BP:      True (T) if we built or rebuilt the preconditioner, False (F) otherwise.
cost:    cost, J = Jd + Jr
misfit: misfit cost, Jd
reg:     regularization cost, Jr
(g,p):   inner product between gradient, g, and Newton search direction, p
||g||L2: l2 norm of gradient
alpha:   step size
tolcg:  relative tolerance for Hp=-g CG solve (unpreconditioned residual decrease)
